[\[HOW TO\] Install froyo 2.2 on your virgin mobile intercept!](#)

You will lose all your apps and have to reinstall all of them

[Warnings: I am NOT responsible if your phone is bricked while doing this!]

Known features not working: mms(people are working on this and it never worked for me anyways)
Voicemail notifications [(**Install a app called voicemail notifier it fixes this**) the app states its for gsm only but works fine on virgin mobile]

This update was meant for the sprint samsung intercepts but it works perfectly besides mms and voice mail notifications but theres a fix for that on the virgin mobile intercepts but includes some sprint apps that dont work. im going to tell you how to remove most of those.

Steps:

1.You may already have this but you have to have SWupdater with the louZiffer patch

a.) to do that you download and install this [HERE](#)

b.) then download and install this patch [HERE](#)

2.Now you have to flash a stock sprint 2.1 rom first which is here [HERE](#) make sure to delete the .md5 suffix so its just .tar

a.) You put that file in C:\Program Files\Samsung Electronics\SWUpgrade\Models\Binary (MAKE SURE YOU DELETE THE FILE IN THAT FOLDER BEFORE if you dont you will BRICK your phone)

b.) run SWUpgrade and follow the instructions

3.Now boot up(should do this automatically) you should now be in stock sprint df27 2.1

4.now put this file on the root of your sd card [HERE](#)

(make sure you have a mostly full battery upgrading to froyo takes a lot of battery and if you die in the middle of it your phone will brick)

5. now shut down your phone. then hold [vol DOWN, end and call buttons] you should go into recovery then push the install update.zip button.

6. you should now be in stock 2.2 froyo enjoy.

HOW TO root and remove unwanted sprint apps.

1. Flash Slapkernel using the .tar SWUpgrade method replace the SlapKernel-v1.0.tar with the any other .tar in C:\Program Files\Samsung Electronics\SWUgrade\Models\Binary\ [http://forum.sdx-developers.com/intercept-development/slapkernel-1-0-for-froyo-2-2-\(root-init-d-scripts\)-test-please/](http://forum.sdx-developers.com/intercept-development/slapkernel-1-0-for-froyo-2-2-(root-init-d-scripts)-test-please/)

2. download [Sdx App Removal](#)

3. I removed

- cm-android.apk - Visual Voicemail (doesn't work on vm)
- nascar09-prod-release.apk - Nascar Sprint Cup Mobile (doesn't work on vm)
- sfl-prod-release.apk - NFL Mobile Live (doesn't work on vm)
- SprintNavigation.apk - Sprint Navigation (doesn't work on vm)
- SprintAndroidExtension.apk (doesn't work on vm)
- SprintTVWidget.apk - Sprint TV's Widget (doesn't work on vm)
- SprintTV.apk - (doesn't work on vm)

4. Sprint hotspot is located somewhere in the settings.apk so it can't be removed right now so just ignore it or hide it with launcher pro

Optional: after you have root access (flashed slapkernel with swupgrade) you can flash a custom recovery following this guide [Custom Recovery](#)

Thanks 🙏 to caspian for sdx stock app remover, dodgejcr for posting froyo onto sdx, IceMank121 Apothecaryaron for getting the update.zip, and ckpcw for slapkernel

Hey bpear - nice guide!

The rooting part is missing a step - you have to use the epic exploit or kuro's one-click in order to get the custom recovery on there.

I've released SlapKernel as a SWUpgrade .tar, which will provide root. I suggest changing root steps 1-2 to a SWUpgrade kernel flash. Custom recovery could be added after if desired.

(Install a app called voicemail notifier it fixes this)

Hi there.
The 'Voicemail Notifications' app listed in the Market states that it's for GSM Only.
Is there another app out there that works with CDMA, or am I missing something?

Thanks a lot for the guide!

bpbear, thanks for this.

<http://02ee24b.netsolhost.com/download...der/update.zip> (step 4) link does not work.
Can you provide another link?

Thanks!

Cool, just installed it and sure enough it works.. thanks a lot!
I don't really care about MMS, but this was killin' me.

If I install Google Voice and people call me at my Google Voice number, I don't need to worry about the voicemail issue. Is it correct?

EDIT:installing. At first I thought the stock sprint rom was not necessary because i was using stock VM rom, but the updater wouldn't proceed with stock VM rom. I figured the update is for sprint so i had to flash the stock Sprint rom. Now im updaing to 2.2

It seems I can put the update.zip on sd card before i flash the stock sprint rom, nothing bad happened.

It was a bit hard to get into the download mode. I found it was easier to disconnect(do I have to?) USB and release those 3 buttons as soon as I saw Samsung on the screen.

After the update I successfully entered the os but it gave me an error

VM intercept

Code: [Select]

```
The firmware update could not be completed. Please try again later.
If the problem persists,you may need to contact customer service.
Error:Internal error.
```

But I dont any actual problems so far

I didn't have 'SprintNavigation.apk', on my phone it was 'SN28.apk'.

This tutorial was awesome!

I had Froyo on mine but the part about removing the bloat worked like a charm.

Thanks again!

Where are the switches for wifi,bt,silence and vibrate(used to be above the notifications)? The space is blank now

that was a modification samsung made the new 2.2 is completely stock. That also makes it much faster dodgejcr is working on porting the switches to 2.2

Thanks OP. I've tested it a bit on a VM Intercept,no problem so far.

None of the Sprint Apps work,not sure if that's because I have Wi-Fi on.

Tether works great.

How can I install apps to storage card? I don't see move apps to storage card in settings.

Tether works great.

Is that wired or wireless? I thought wireless tether wasn't working. Which app, or native Froyo?
Thanks
